

QES SERVICES

We have developed our own know-how in the fields of quality, environment, safety, documentation and archiving.

Our QES specialists can support companies, in particular regarding safety issues within their organisation, or on sites for which they assume responsibility as project manager and/or site manager.

The aim of Records Management is to systematically organise all documents or data that are useful to the company, without having to be concerned with EDM tools (electronic document management). It makes it easier to find the right information quickly and efficiently. Our documentation and archiving specialist can work with you to develop a system for managing paper and electronic documents, using filing plans, inventory, etc.

Methodology

Safety:

SUVA methods such as risk portfolio, risk analysis at workstations and during work processes, PHS (Health and Safety Plan) for construction sites, etc.

Safety systems for companies according to the requirements of the Federal Coordination Commission for Occupational Safety Directive (CFST Directive 6508)

Documentation:

Methods adapted to the relevant standards but above all to the company's needs.

Client benefits

Safety

- Knowledge of the risks and the measures needed to manage them.
- Implementation of a security system in compliance with legal requirements, specifically those of the CFST.
- Improving work safety.

Documentation

- Efficient document filing, saving time.
- Document traceability and availability of necessary information.
