

A TRAINING COMPANY

Our employees are specialised in the operation and maintenance of hydroelectric plants. As such, they hold and maintain specialised know-how that is becoming rare in Switzerland.

Our business: hydroelectric operations

We specialise in the operation and maintenance of hydroelectric plants. For this reason, they hold and maintain specialised know-how that is becoming rare in Switzerland. These skills are regularly updated through continuous education. The quality of our services is thus guaranteed. HYDRO Exploitation is involved in the continuous education committee of the Swiss Water Management Association. We have helped the universities of Sion, Rapperswil and Horw to offer seven further education modules for specialists in the hydroelectric industry.

In addition, HYDRO Exploitation continues to provide basic training for its personnel. In collaboration with a specialised school, it offers language courses on preferential terms.

The apprentices

HYDRO Exploitation is investing in the next generation. Our centralised workshops in Martigny serve as a training centre for automation apprentices, polymechanics and industrial designers. Currently, 22 young people are undergoing training, learning in-depth skills from professionals.
